

Patch Packs™ throw and go patching:

- Asphalt and concrete paved roads, highways and bridge decks
- Pavement repair around drains, manholes and other fixtures
- Bike lanes, golf cart paths and other multi-use pathways
- Parking lots, driveways and commercially-trafficked surfaces

All-weather installation:
Sun, snow, and rain all contribute to activate the cure and long-term bond of the patch.

Environmentally-friendly:
No VOCs in the mix. No heavy equipment needed for install. Recycled content and recyclable packaging.

Throw and go material:
Repairs require no skilled labor, no tools and minimal to no lane closures; traffic compacts the patch.

No temperature limitations:
Installs in extreme cold or heat to create a year round patching program, including the coldest, wettest months.

Patch Packs

Patch Packs are an innovative, pothole patching solution that completely upends traditional cold-mix patching. Mesh packs containing recycled aggregate, a non-volatile binder and eco-friendly cold asphalt are hand-placed and overlapped in spalls at least 1" deep. A proprietary binder formula allows Patch Packs to spread and be compressed by vehicle load, bonding to the sides and bottom and sealing the top of the spall. Compression time is faster with heavier, higher-volume traffic. Traffic patterns and environmental conditions also impact compression time.

Box: 14 packs, 44 lbs

Pallet: 56 boxes

Truckload: 18 pallets

Coverage rate: .52 cubic feet per box

The Fastest, Cleanest, Easiest Pothole Patch Ever!

Patch Packs™ throw and go patching:

Find a pothole.

Lay Patch Packs facing oncoming traffic.

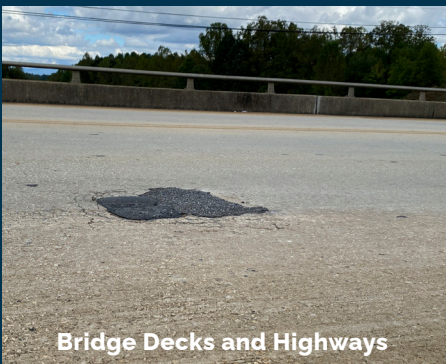

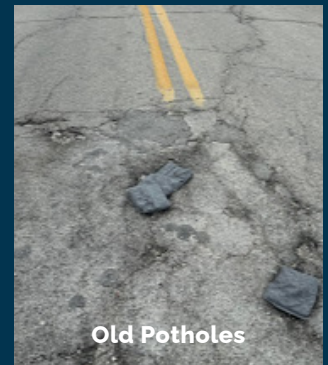

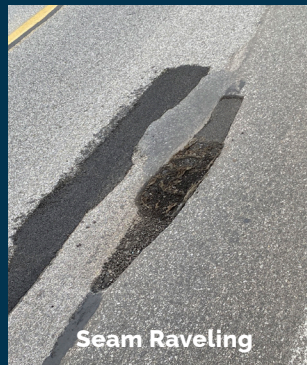

Let traffic compress patch.

Admire your work.
