

Fibrecrete G® flexible, durable concrete repair material:

- Crack, joint and spall repair for roads, highways and bridge decks, fixtures, drains, and manholes, parking lots, driveways and commercially-trafficked surfaces
- Build America Buy America Act compliant
- Meets ASTM D8260 Hot-Applied Mastic physical properties

Fast open to traffic:

Cures rapidly and is ready for traffic when cool, usually in an hour after application.

No temperature limitations:

Installs in extreme cold or heat so repairs can be made day or night, and year round.

Concrete protection:

Resistant to water intrusion, deicing salts, and other organic materials.

Flexible and resilient:

Flexes with movement from traffic load, vibration, thermal expansion and contraction.

Fibrecrete G

Fibrecrete G is a hot-applied, flexible concrete repair material. It is formulated with polymer-modified resins, fiberglass, mineral fillers and high-quality aggregate. Its proprietary formula allows Fibrecrete G to remain flexible, yet strong enough to handle heavy traffic and the stresses of changing temperatures and seasons.

Fibrecrete G: 50 lb/meltable bag (50 bags/pallet)

Bulking Stone: 50 lb/bag (50 bags/pallet)

Topping Stone: 50 lb/bag (50 bags/pallet)

Primer: 5 gallon pail

Typical Truckload: 13 pallets Fibrecrete G, 5 pails Primer, 4 pallets Bulking Stone, 1 Pallet Topping Stone,

Fibrecrete G Installation:

Prepare area to be repaired by milling, jack hammering or approved method. Clean out loose debris and apply primer.

Heat Fibrecrete G in a mastic kettle, pour in molten material and add Bulking Stone (repairs over 1" deep). Repeat in lifts for deeper repairs.

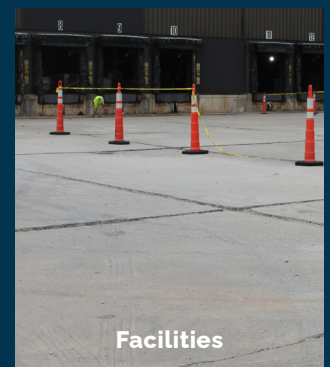

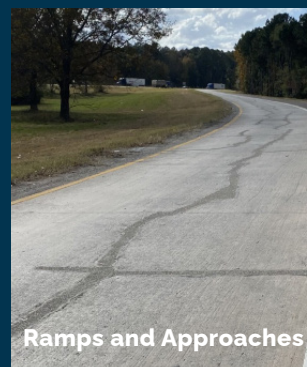

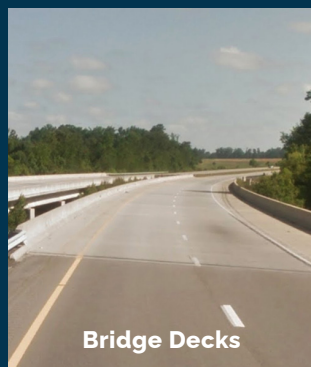

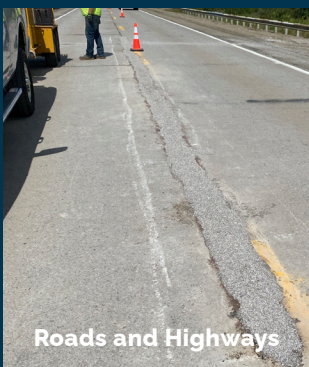

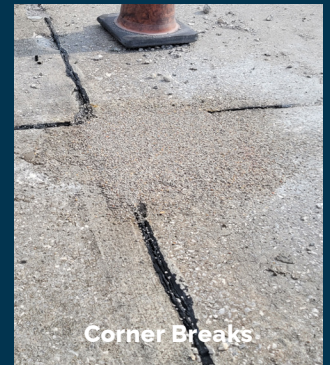

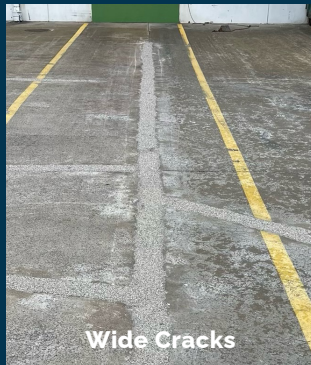

Pour molten Fibrecrete G into the remaining repair depth, screed to a level grade and apply Topping Stone for skid resistance.

Allow Fibrecrete G repair to cool and reopen to traffic, usually within an hour depending on the size of the repair.

Use Fibrecrete G for:
