

Patch Packs™ throw and go emergency pothole patching:

- Asphalt and concrete paved roads, highways and bridge decks
- Pavement repair around drains, manholes and other fixtures
- Vehicular recreational paths and other multi-use pathways
- Parking lots, driveways and commercially-trafficked surfaces

Innovative material:

Special polymers react to traffic load to spread and seal the patch.

Environmentally-friendly:

No VOCs. No heavy equipment needed. Recycled content and recyclable packaging.

Throw and go material:

Repairs require no skilled labor, no tools and no lane closures.

All weather installation:

Installs in extreme cold or heat so repairs can be made as soon as a pothole forms.

Patch Packs and Patch Packs Flex

Patch Packs are an innovative, emergency pothole patching solution that completely upends traditional cold-mix patching. Packs containing recycled aggregate, a non-volatile binder and eco-friendly cold asphalt are hand-placed and overlapped in potholes at least 1" deep. A proprietary binder formula allows Patch Packs to spread and be compacted by vehicle load, bonding to the sides and bottom and sealing the top of the pothole. Full compaction time is faster with heavier, higher-volume traffic. Traffic patterns and environmental conditions also impact compaction time.

Box: 44 lbs, 0.96 cubic feet

Pallet: 56 boxes

Truckload: 18 pallets

Patch Packs:
proprietary asphalt binder
and RAP in a mesh pack

Patch Packs Flex:
proprietary asphalt binder
and RAP in a flexible net pack

The Fastest, Cleanest, Easiest Pothole Patch Ever!

Patch Packs™ throw and go emergency pothole patching:

Find a pothole.

Lay Patch Packs facing oncoming traffic.

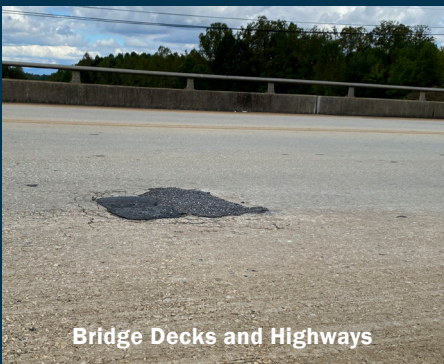

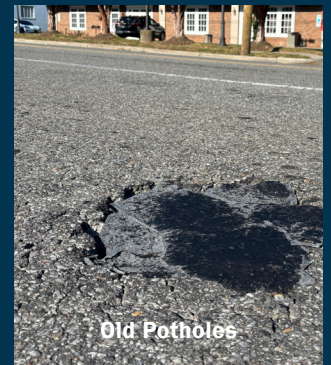

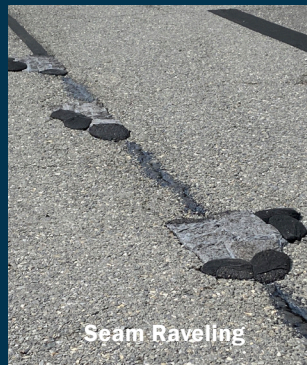

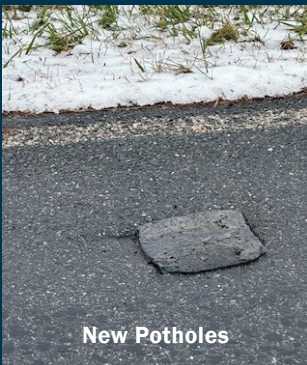

Let traffic compress patch.

Admire your work.
